

# Deployment Checklist

Use this to ensure successful deployment.

---

## Pre-Deployment

### 1. Turso Database Setup

- ☐ Turso CLI installed: `turso --version`
- ☐ Logged in: `turso auth login`
- ☐ Database created: `turso db create blog-production`
- ☐ Got database URL: `turso db show blog-production --url`
- ☐ Got auth token: `turso db tokens create blog-production`
- ☐ Saved both values securely

### 2. Code Repository

- ☐ Code committed to Git
- ☐ Pushed to GitHub/GitLab
- ☐ Repository is public or connected to Vercel

### 3. Environment Variables Ready

- ☐ `TURSO_DATABASE_URL` - Turso database URL
  - ☐ `TURSO_AUTH_TOKEN` - Turso auth token
  - ☐ `JWT_SECRET` - Generated with `openssl rand -base64 32`
- 

## Backend Deployment

### Option A: Vercel

- ☐ `vercel.json` exists in `backend/`
- ☐ Vercel CLI installed: `npm install -g vercel`
- ☐ Deployed: `cd backend && vercel`
- ☐ Environment variables added in Vercel dashboard
- ☐ Production deploy: `vercel --prod`
- ☐ Health check passes: `curl https://your-backend.vercel.app/health`
- ☐ Saved backend URL

### Option B: Fly.io (Recommended)

- ☐ `Dockerfile` exists in `backend/`
- ☐ `fly.toml` exists in `backend/`
- ☐ Fly CLI installed: `brew install flyctl` or `curl -L https://fly.io/install.sh | sh`

- ☐ Logged in: `fly auth login`
  - ☐ App created: `fly apps create your-blog-backend`
  - ☐ Secrets set: `fly secrets set TURSO_DATABASE_URL=... TURSO_AUTH_TOKEN=... JWT_SECRET=...`
  - ☐ Deployed: `fly deploy`
  - ☐ Health check passes: `curl https://your-blog-backend.fly.dev/health`
  - ☐ Saved backend URL
- 

## Frontend Deployment

### Vercel (Next.js)

- ☐ `.env.production` created with backend URL
  - ☐ Vercel CLI installed
  - ☐ Deployed: `cd frontend && vercel`
  - ☐ Environment variable added: `NEXT_PUBLIC_API_URL`
  - ☐ Production deploy: `vercel --prod`
  - ☐ Site loads: `https://your-blog.vercel.app`
  - ☐ No console errors
  - ☐ API calls work (check Network tab)
- 

## Database Initialization

- ☐ Schema initialized (one of these):
    - ☐ Via Turso shell: `turso db shell blog-production < schema.sql`
    - ☐ Via backend setup endpoint: `curl -X POST https://backend/api/setup`
  - ☐ Admin user created
  - ☐ Can login at: `https://your-blog.vercel.app/login`
- 

## Testing in Production

### Basic Functionality

- ☐ Homepage loads
- ☐ Blog list shows
- ☐ Individual post loads
- ☐ RSS feed works: `/feed.xml`

### Admin Panel

- ☐ Can access login page
- ☐ Can login with admin credentials
- ☐ Redirects to `/admin`

- ☐ Dashboard loads
- ☐ Can create new post
- ☐ Can edit existing post
- ☐ Can upload images
- ☐ Can delete post

### Images

- ☐ Image upload works
- ☐ Uploaded images display
- ☐ Thumbnails generate
- ☐ WebP variants create
- ☐ Analytics shows data

### API Endpoints

- ☐ GET /health - Returns 200
  - ☐ GET /api/posts - Returns posts
  - ☐ GET /feed.xml - Returns RSS XML
  - ☐ POST /api/auth/login - Login works
  - ☐ GET /api/images/analytics - Returns stats
- 

### Performance Check

- ☐ Lighthouse score > 90
  - ☐ Images load quickly
  - ☐ No console errors
  - ☐ No 404s in Network tab
  - ☐ HTTPS enabled (automatic)
  - ☐ Gzip compression enabled
- 

### SEO & Content

- ☐ Site title set
  - ☐ Meta descriptions added
  - ☐ OG tags configured
  - ☐ Robots.txt exists
  - ☐ Sitemap.xml exists
  - ☐ RSS feed accessible
-

## Security

- ☐ Changed default admin password
  - ☐ Strong `JWT_SECRET` set
  - ☐ HTTPS enabled
  - ☐ CORS properly configured
  - ☐ No sensitive data in frontend code
  - ☐ Environment variables not exposed
- 

## Monitoring

### Vercel

- ☐ Checked deployment logs
- ☐ No build errors
- ☐ Analytics enabled (optional)

### Fly.io (if used)

- ☐ Checked logs: `fly logs`
- ☐ VM running: `fly status`
- ☐ Health checks passing

### Turso

- ☐ Database accessible
  - ☐ Usage within limits
  - ☐ Backups configured (optional)
- 

## Optional: Custom Domain

- ☐ Domain purchased
  - ☐ DNS configured
  - ☐ Added to Vercel project
  - ☐ SSL certificate issued
  - ☐ Site accessible at custom domain
  - ☐ Redirect `www` to non-`www` (or vice versa)
- 

## Post-Deployment

- ☐ Created first real blog post
- ☐ Tested on mobile
- ☐ Tested on different browsers

- ☐ Shared with friends/colleagues
  - ☐ Announced on social media
- 

## Troubleshooting Completed

If you checked all boxes above, your blog is: - Deployed - Tested - Secure - Production-ready

---

## Quick Commands Reference

```
# Deploy backend (Fly.io)
cd backend && fly deploy

# Deploy frontend
cd frontend && vercel --prod

# Check backend health
curl https://your-backend.fly.dev/health

# View backend logs
fly logs

# View frontend logs
vercel logs

# Update backend secrets
fly secrets set JWT_SECRET=new-secret

# Update frontend env
# (Do in Vercel dashboard, then redeploy)
```

---

## Emergency Rollback

### Backend (Fly.io)

```
fly releases
fly releases rollback <version>
```

### Frontend (Vercel)

```
vercel rollback <deployment-url>
```

---

**Status:** Check boxes as you complete each step!

**Ready to launch?** When all boxes are checked, you're good to go!
