

Feature Implementation Roadmap

Priority Order (Recommended)

High Priority (Core Functionality)

1. **Admin Dashboard** - Essential for managing content
2. **Authentication System** - Required for admin dashboard
3. **Image Upload** - Critical for blog content quality

Medium Priority (Enhanced UX)

4. **RSS Feed** - Standard blog feature
5. **Search Functionality** - User experience improvement
6. **Social Sharing** - Content distribution

Nice to Have

7. **Comment Moderation** - Community engagement
 8. **Email Notifications** - User engagement
-

Quick Wins I Can Build Right Now

Option A: Admin Dashboard (30 min)

What you get: - Protected admin routes in Next.js - Post management UI (create, edit, delete) - Simple password protection (before full auth) - Live preview of markdown - Drag-and-drop featured images

Tech: Next.js Server Actions, React Hook Form

Option B: RSS Feed (10 min)

What you get: - `/feed.xml` endpoint - Auto-generates from your posts - SEO boost - Works with all RSS readers

Tech: Simple Rust endpoint generating XML

Option C: Image Upload (20 min)

What you get: - Upload images for posts - Store in Vercel Blob or Cloudinary - Automatic image optimization - CDN delivery

Tech: Vercel Blob Storage or Cloudinary API

Option D: Social Sharing (15 min)

What you get: - Share buttons (Twitter, Facebook, LinkedIn, Reddit) - Open Graph meta tags - Twitter Card support - Copy link button

Tech: Pure frontend, no backend needed

Full Feature Breakdowns

1 Admin Dashboard

Frontend (Next.js):

```
/admin
  /dashboard      - Overview stats
  /posts          - List all posts
  /posts/new      - Create new post
  /posts/[id]/edit - Edit existing post
  /settings       - Blog settings
```

Features: - Rich text editor with markdown preview - Image upload for featured images - Tag management - Draft/publish workflow - Post analytics

Time to build: 2-3 hours

2 Authentication System

Backend (Rust): - JWT token generation - Password hashing with bcrypt - Login/logout endpoints - Token validation middleware - Refresh token support

Frontend: - Login page - Protected routes - Session management - Automatic token refresh

Database:

```
-- Already have users table!
- Add: last_login, refresh_token fields
```

Time to build: 2-3 hours

3 Image Upload

Option A: Vercel Blob (Recommended)

```
// Simple upload
const blob = await put('post-images/image.jpg', file, {
```

```
    access: 'public',
  });
```

Option B: Cloudinary - More features (transforms, CDN) - Free tier: 25GB storage

Backend endpoint:

POST /api/upload/image

- Validates file type/size
- Uploads to storage
- Returns public URL

Time to build: 1-2 hours

4 RSS Feed

Backend endpoint:

GET /feed.xml

- Fetches latest 20 posts
- Generates XML format
- Includes full content or excerpt

XML structure:

```
<?xml version="1.0"?>
<rss version="2.0">
  <channel>
    <title>My Blog</title>
    <item>
      <title>Post Title</title>
      <link>https://blog.com/post-slug</link>
      <description>Post excerpt</description>
      <pubDate>Mon, 01 Jan 2024 00:00:00 GMT</pubDate>
    </item>
  </channel>
</rss>
```

Time to build: 30 minutes

5 Search Functionality

Option A: Simple (SQLite FTS)

```
-- Enable full-text search
CREATE VIRTUAL TABLE posts_fts USING fts5(title, content);
```

Option B: Advanced (Meilisearch/Algolia) - Typo tolerance - Instant results - Faceted search

Backend:

GET /api/search?q=keyword
- Searches title, content, tags
- Returns ranked results

Frontend: - Search bar in header - Instant search results - Keyboard shortcuts (Cmd+K)

Time to build: 2-3 hours (simple) or 4-5 hours (advanced)

6 Social Sharing

Meta Tags (in layout.tsx):

```
<meta property="og:title" content={post.title} />  
<meta property="og:description" content={post.excerpt} />  
<meta property="og:image" content={post.featured_image} />  
<meta name="twitter:card" content="summary_large_image" />
```

Share Buttons:

- Twitter/X
- Facebook
- LinkedIn
- Reddit
- Email
- Copy link

Time to build: 1 hour

7 Comment Moderation

Already have comments table!

Backend endpoints:

```
POST /api/posts/{id}/comments - Submit comment  
GET /api/posts/{id}/comments - Get approved comments  
PUT /api/comments/{id}/approve - Approve comment (admin)  
DELETE /api/comments/{id} - Delete spam
```

Features: - Akismet spam detection (optional) - Admin approval workflow - Email notifications - Reply threading (optional)

Time to build: 3-4 hours

8 Email Notifications

Use Cases: - New comment notification to author - Comment approval notification - Newsletter (new post published) - Welcome email for subscribers

Options: - **Resend** - 3000 emails/month free - **SendGrid** - 100 emails/day free - **Postmark** - 100 emails/month free

Backend:

POST /api/subscribe - Add email to list
POST /api/notify/comment - Trigger comment notification

Time to build: 2-3 hours

What Should I Build First?

Tell me which feature(s) you want, and I'll build them now!

Quick Recommendation:

For immediate impact, I suggest building in this order:

1. **RSS Feed** (10 min) - Quick win, standard feature
2. **Social Sharing** (15 min) - Easy SEO boost
3. **Admin Dashboard** (2-3 hours) - Makes content management easier
4. **Authentication** (2-3 hours) - Secures the admin dashboard
5. **Image Upload** (1-2 hours) - Better looking posts

Want me to start with any of these? Just say which one(s) and I'll build them for you!

Budget-Friendly Services

All features can use free tiers: - **Vercel Blob**: 100GB free - **Cloudinary**: 25GB free - **Resend**: 3000 emails/month free - **Meilisearch**: Self-hosted or free cloud tier - **Turso**: 500 DBs free, 1B row reads/month

Notes

- Most features integrate seamlessly with your existing setup
- No breaking changes to current functionality
- Can be built incrementally

- All features production-ready

Let me know which feature(s) you want built first!
