

## Common Errors and Fixes

### All Fixed! Your Routes Are:

The routing conflict has been resolved. Here are your working API endpoints:

|        |                           |                     |
|--------|---------------------------|---------------------|
| GET    | /health                   | - Health check      |
| GET    | /api/posts                | - List all posts    |
| POST   | /api/posts                | - Create a post     |
| GET    | /api/posts/by-slug/{slug} | - Get post by slug  |
| PUT    | /api/posts/{id}           | - Update post by ID |
| DELETE | /api/posts/{id}           | - Delete post by ID |

### Test Your Setup

#### 1. Start the backend:

```
cd backend
cargo run
```

#### 2. Health check:

```
curl http://localhost:3000/health
```

Should return: {"success":true,"data":"OK","error":null}

#### 3. List posts (empty at first):

```
curl http://localhost:3000/api/posts
```

Should return: {"success":true,"data":[],"error":null}

#### 4. Create your first post:

```
curl -X POST http://localhost:3000/api/posts \
-H "Content-Type: application/json" \
-d '{
  "title": "Hello World",
  "slug": "hello-world",
  "content": "# Welcome\n\nThis is my first blog post!",
  "excerpt": "A warm welcome to my new blog",
  "status": "published"
}'
```

#### 5. Get the post by slug:

```
curl http://localhost:3000/api/posts/by-slug/hello-world
```

## Starting the Frontend

```
cd frontend
npm install
```

```
cp .env.local.example .env.local
# Edit .env.local and set:
# NEXT_PUBLIC_API_URL=http://localhost:3000
npm run dev
```

Visit: <http://localhost:3001>

## Common Issues Resolved

**“TURSO\_DATABASE\_URL must be set”**

**Fixed:** Added `dotenv::dotenv().ok();` to load `.env` file

**“Path segments must not start with :”**

**Fixed:** Changed `:param` to `{param}` syntax

**“Insertion failed due to conflict”**

**Fixed:** Changed routes to: - `/api/posts/by-slug/{slug}` for getting by slug  
- `/api/posts/{id}` for update/delete by ID

## Everything Should Work Now!

Run `cargo run` and you should see:

Server running on <http://0.0.0.0:3000>

No more errors!
